

10.4 Sharing Designs in Image Format

Sometimes, it can be difficult to communicate your learning design details with others due to the complexity and volume of information involved. When you want to show or discuss a specific part of the design, capturing screenshots yourself can be frustrating. In this section, you will learn how to export your Curriculum Component (CC) as images. You can then place them on a slide or add annotations as needed.

The screenshot displays a Curriculum Component (CC) interface. At the top, a header bar contains a title, a pencil icon, a trash icon, and a download icon (highlighted with a red box). Below the header, the 'Intended Learning Outcomes' section lists three outcomes, each with an 'Apply' or 'Evaluate' button and a green checkmark. The 'Disciplinary Practice' and 'Pedagogical Approach' sections are also visible. The 'Learning Task(s)' section includes a checklist item 'Check your own blog post' and detailed instructions for students and teachers. At the bottom, there are icons for 'In-class', '5 min', 'Inside Classroom', 'Individual', and 'Self', along with a button labeled 'ILAP CHECKLIST'.

Figure 10.20: An example of a CC

In each CC header, you can see a  button. By clicking it, a confirmation window will appear.

By Clicking the **EXPORT** button, a zip file will be downloaded containing individual images for the CC header and each learning task.
